Emergency and evacuation signage is a challenge that had long been awaiting a solution.

Both regulations and common sense require all buildings to be signposted though, unfortunately, the standard alternatives that the marked provides are far from satisfactory, both in terms of the basic materials used and their rather impersonal icons.

In fact, signposting a space according to the regulations ends up being a threat to aesthetics and good taste.

With that premise, we at Signes have developed and manufactured a category A (*) typology of emergency and evacuation signage which while complying with current regulations (**) has a much better design at a competitive price.

We know that they were not difficult to improve, but we are happy with the outcome.

The materials, finishes, better honed colours, and the association with typographer Andreu Balius, who designed the DSIGNES typography and pictograms, all led to the final launch of this Signes product.

Museo del Prado - Madrid

Telefónica Universitat - Barcelona

(*) CATEGORY A

High luminance photoluminescent products are the usual choice for signage and beacons in public places or where the lighting is predominantly artificial.

(**) REGULATIONS

UNE 23033-1:1981. Defines signage for fire protection (extinguishers, hose reels, outdoor hydrants, manual call points and release devices for extinguishing systems).

UNE 23034:1988. Defines signage for evacuation.

Photoluminescent signs must meet the requirements of **UNE 23035-1:2003, UNE 23035-2:2003 y UNE 23035-4:2003.**

Barcelona Renaissance Hotel

Splau Shopping Center - Barcelona

STANDARDISED DESIGNS

MATERIAL · 3 mm aluminium plate.

FINISH · Painted with two component polyurethane-based resin oven dried. Screen-printed graphics (category A).

DIMENSIONS · 420x210 mm / 210x210 mm.

E30 · Addressable / point

E42 · Pictograms

E50 · Other messages

* Models for ordering (not held in stock)

** Stock in Spanish and Catalan
