WetFloor
MFS Mobile Free-Standing sign
for provisional messages

WetFloor is a safety sign support for quality environments.

Safety signs for wet floors are essential in areas with a high density of users.

WetFloor is a support intended for spaces where image matters. Its design makes it ideal for environments with a select interior décor, furnishings and accessories that shape the overall aesthetic of the space.

Standard Models

Message in several languages.

Adaptable Graphics

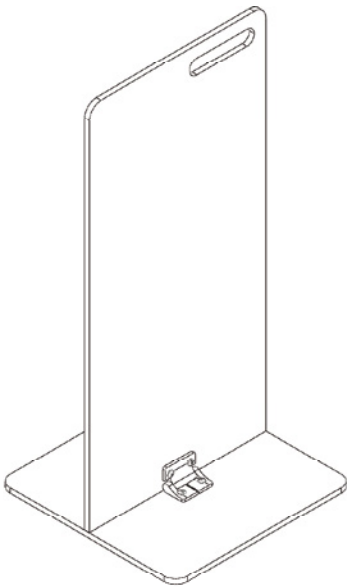

Check the possibilities of item customisation with corporate logo or message tailored to requirements.

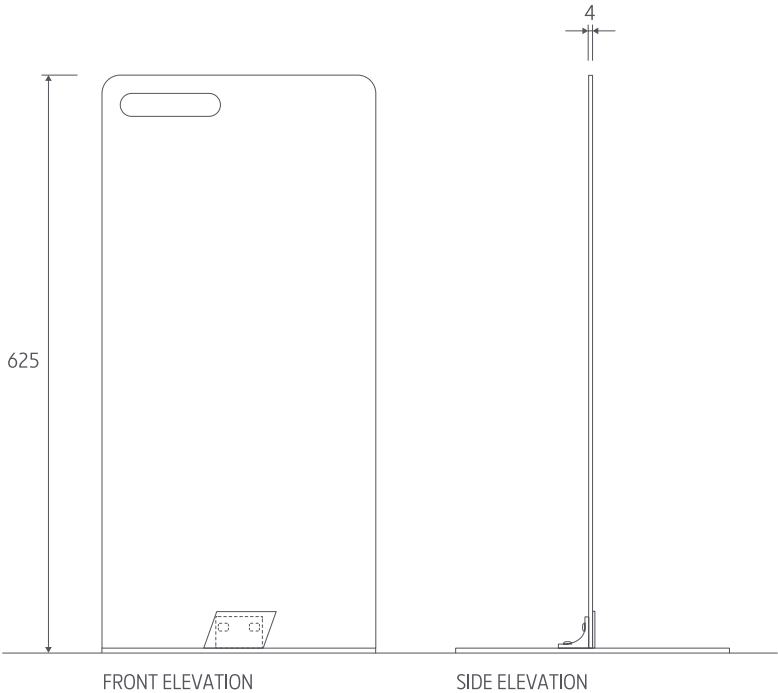

Technical Data

High pressure laminate made of compact phenolic panelling. The material is a mixture of up to 70% of fibres based on wood and heat hardened resins, a solid and robust material resistant to shocks, water and moisture.

Foldable and easy to store thanks to its special hinge. Easy to use with just one hand.

Carbon Footprint

The carbon footprint measures the total greenhouse gases that are released during a products life cycle and is used to calculate the unit impact as a reference indicator for making comparisons with alternative options.

In order to comparatively evaluate a product's environmental performance, two alternative scenarios with a similar design and cost are proposed.

14,4 Kg_{eq} CO₂

Data obtained from the Life Cycle Analysis carried out by OiKo Design Office (www.oikobcn.com)
